

## Configure Webapp for First Time

You have never used this Survey before. You must configure it for the first time, before using it.

You must know all of these bits of information. Primarily, you must tell this survey what database you want to connect to. You can only use a MySQL database, which you must have set up on this machine. You may have to ask someone else for this administration information if you are not the administrator of this machine, and if you don't know the MySQL information.

Email Address	<input type="text"/>	<a href="#">?</a>
MySQL UserID	<input type="text" value="root"/>	<a href="#">?</a>
MySQL Password	<input type="text"/>	<a href="#">?</a>
MySQL Host Name	<input type="text" value="localhost"/>	<a href="#">?</a>
MySQL Database	<input type="text" value="jspsurveymanager"/>	<a href="#">?</a>
Debugging file path (optional)	<input type="text"/>	<a href="#">?</a>
